**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Mukundan Chakrapani, Registration No. 60,879 on November 19, 2009.

2. The application has been amended as follows:

Claim 1 has been amended as follows:

A data transmission apparatus having ingress and egress ports, and comprising:  
a scrambler to split a fanout of ingress data, from each ingress port to the egress ports, into a first sub-group and a second sub-group and to scramble the first and second sub-groups according to a scrambling sequence function to provide a combined scrambled output of the first and second sub-groups having a constant number of toggled bits with respect to time, wherein the first and second sub-groups carry same data prior to being scrambled.

Claim 25 has been amended as follows:

A computer-implemented method of transmitting data in a data transmission apparatus having ingress and egress ports, comprising:

splitting a fanout of ingress data, from each ingress port to the egress ports, into a first sub-group and a second sub-group; and

scrambling the first and second sub-groups according to a scrambling sequence function into first and second scrambled data, respectively, the first and second scrambled data, when considered together, having a constant number of bits that are toggled with respect to time, wherein the first and second sub-groups carry same data prior to being scrambled.

Claim 36 has been amended as follows:

A scrambler circuit for use with a data transmission apparatus having ingress and egress ports, the scrambler comprising:

ingress logic to split a fanout of ingress data, from each ingress port to the egress ports, into a first sub-group and a second sub-group; and

scrambling logic to scramble the first and second sub-groups according to a scrambling sequence function to provide a combined scrambled output of the first and second sub-groups having a constant number of bits that are toggled with respect to time, wherein the first and second sub-groups carry same data prior to being scrambled.

Claim 37 has been canceled.

### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance: the prior art made of record fails to teach or fairly suggests in combination a data transmission apparatus having ingress and egress ports, and comprising: a scrambler to split a fanout of ingress data, from each ingress port to the egress ports, into a first sub-group and a second sub-group, and to scramble the first and second sub-groups according to a scrambling sequence function to provide a combined scrambled output of the first and second sub-groups having a constant number of toggled bits with respect to time, wherein the first and second sub-groups carry same data prior to being scrambled.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
